

Person-Positivity Bias, Social Category Labels, and Attitudes toward Gays and Lesbians

Replication File

May 21, 2019

Loading Data

These analyses were conducted using R 3.5.1 on macOS High Sierra 10.13.4. To run the analyses, you must load the data `qword.csv`, as shown below.

```
> ## If do not have packages, use install.packages()
> library(ggplot2)
```

```
> ## Load Data
> con <- read.csv("qword.csv")
>
> ## subset to straight respondents
> constr <- subset(con, straight == 1)
> nrow(constr) # number of observations
```

```
[1] 1871
```

Variables

This section describes the coding of the variables in the analysis data. See Online Appendix for question wording.

- `age`: numeric age
- `agecat`: age categories (18-34, 35-44, 45-64, 65+)
- `female`: indicator for 1=female, 0=male
- `whitenh`, `blacknh`, `hisp`: indicator variables for White, non-Hispanic, Black, non-Hispanic and Hispanic
- `dem`, `rep`, `ind`: indicator variables for identifying as an Independent, Democrat/leaner, or Republican/leaner
- `college`: indicator variable for having a college degree
- `incn`: numeric household income category
- `lib`, `con`: indicator variables for identifying as conservative or liberal
- `auth.s`: authoritarianism scale from 0 to 1
- `straight`: indicator variable for self-identifying as heterosexual or straight
- `knowgaylesyes`: indicator variable for knowing someone who identifies as gay or lesbian
- `evangelical`: indicator variable for identifying as a born again or Evangelical Christian.
- `treat.ft`: categorical variable for feeling thermometer treatment group ("Gay and Lesbian Sexuality", "Gays and Lesbians", "Homosexuality", "Homosexuals")
- `treat.hs`: categorical variable for moral deterioration treatment group ("Gay and Lesbian Sexuality", "Gays and Lesbians", "Homosexuality", "Homosexuals", "Sexual Relations")
- `ft.all`, `ft.gayles`, `ft.glty`, `ft.homosexual`, `ft.homosexuality`: feeling thermometer scores from 0 to 100
- `ft.trumpism`, `ft.trumppeop`: feeling thermometer scores for Trump in people vs. construct condition, from 0 to 100
- `tmd.all`, `tmd.gayles`, `tmd.glty`, `tmd.homosexual`, `tmd.homosexuality`, `tmd.sex`: agreement on moral deterioration question, from 1 to 5.

Analyses in Main Text

This section produces the data included in Table 1.

```
